Palram Projects Support

About Palram
Palram was founded in 1963 and is a leading global manufacturer of semi-finished extruded thermoplastic sheets, panel systems and consumer products. Palram sheets, manufactured mainly from Polycarbonate and PVC, are designed to suit a diverse range of applications in various markets, which include DIY, construction, architectural projects, advertising, agricultural, glazing, and fabrication. Palram panel systems are offered as part of the company’s advanced products and services bundle for the construction and architectural markets. A variety of finished-products are marketed through DIY chain stores across the globe.

Project Support
In the last two decades, the Palram Project Support Center has helped specify, adapt, support and facilitate architectural and industrial challenges around the globe. Among the Center’s team members are civil engineers, designers, technical supporters, plastics engineers and others. The team offers a bundle of professional services based on accumulated experience in medium and large scale projects, a part of which are displayed here.

Services for Planners
Planning Stage
- Quick matching of product specification per project
- Adapting plans while preserving the planner’s vision
- Creation of specific planning details
- Professional consultation on planning meetings
- Expert advice on materials and engineering
- Creating conceptual designs for given structures

Implementation Stage
- Creating specific installation guidelines per project
- On-site support at important execution stages
- Background construction engineering supervision
- Conducting special seminars upon request
Introduction to PALRUF®

PALRUF corrugated PVC panel combines excellent resistance to chemicals, fire and impact, resulting in an extremely durable roofing solution. PALRUF withstands harsh chemical environments where conventional roofing quickly corrodes, which makes it ideal for long term use in demanding industrial applications such as chemical plants and storages, mines, ports and more. For domestic applications, it is ideal as a clear (in cold northern climates) or opaque roofing material that is easy to install and maintain. PALRUF evolved into the high quality product it is today based on the experience of nearly 50 years of service. It is lightweight, safe, extremely easy to handle and install using conventional tools and requires no maintenance.

Main Benefits

Excellent Chemical Resistance - PALRUF withstands a wide variety of chemicals, making it ideal for applications in chemically aggressive environments.

UV and Weather Resistant - Offering long service periods in cold or hot climates.

Flexible - Suitable for curved roofing.

Non-Corrosive - PALRUF is ideal for seaside projects, mines, livestock farms and more.

Insulating - Heat buildup is reduced in comparison with metal roofing, which creates a cooler and more friendly environment within the structure.

Minimum Maintenance - Freedom from high maintenance and frequent roofing replacement.

High Impact Strength - Resisting hail, wind and snow loads.

Fire Resistance - PALRUF self-extinguishes and meets the highest standards in the field.

Colour Specification

When specifying PALRUF colored sheets it is important to consider the climactic conditions where the sheets will be installed. PALRUF white opaque is suitable for any climate and geographical region and will serve as a cost-effective solution in most cases. PALRUF is also available in a range of transparent, translucent and opaque colours which should be specified according to the weather conditions in the area of installation. Clear and standard colours are suitable for relatively cold climates, special cool colours can be applied in warmer regions. For more details and professional consultation regarding colour application please contact your Palram distributor.
Mining environments are typically characterized with aggressive chemical substances that attack and corrode the infrastructure.

PALRUF® is the only cover solution that resists the attack of minerals, phosphates and other materials found in mines. Its 10 year warranty, 50 years of manufacturing experience, support per project and guaranteed professionalism promise the most suitable and cost effective solution for any roofing, cladding and internal covering challenges in mines.
Mines

Laborers Barracks in
Mineria Caserones - Chile

PALRUF® White Opaque 2.5 mm
Mines

Gaby Mine - Chile
Construction: Bateman

PALRUF® 2mm White Opaque sheets cover the oxygen pools around the mine.
Ports
Ports

Haifa Port - Israel

PALRUF® White Opaque 2mm
The warehouses have permanent contact with sea spray and minerals.

Excellent resistance to chemicals and corrosion makes PALRUF® ideal for any port application.
Sea spray attacks metal panels and causes corrosion. PALRUF® sheets are non-corrosive and resist salty environments.

Ports

Chemical Terminal at Ashdod Port, Israel

PALRUF® White Opaque 3mm
Permanently contact with salt water and minerals.
When building agricultural structures such as barns, dairies, warehouses or simple sheds, it can be anticipated that within a few years the roofing will require maintenance, whether it is weathering, typical gasses in a livestock environment or corrosion due to any other factor. This is not the case when using PALRUF. Any structure covered with PALRUF® corrugated PVC sheets will be virtually maintenance free for over a decade. This makes it economical for the long term, and also provides peace of mind for the operator and owner. PALRUF® has been produced by Palram for over 50 years and was installed in numerous barns, dairies, henhouses, pigpens and similar projects.
Agriculture

Unicoop Planta UPM
Pig Breeding Farm - Paraguay

PALRUF® White Opaque 2.2mm

PALRUF® ideally withstands long term contact with gasses typical of livestock environments.
Agriculture

Dairy Farm - Israel

PALRUF® White Opaque 2mm
Agriculture

Poultry Farm - Israel

PALRUF® White Opaque 2mm
Warehouses
Warehouses

Coca Cola Warehouse - George, South Africa

PALRUF® White Opaque 2mm

PALRUF® prevails where alternative materials fail. It provides a long term roofing and cladding solution in industrial environments and reduces overall maintenance work and expenditure.
Warehouses

Chemical Hangar in TIS Port near Odessa, Ukraine

PALRUF® White Opaque 2mm
Conveyor Belts
Conveyor Belts

Zefa Phosphate Conveyor at Dead Sea Works - Israel

PALRUF® is the only product that stands up to the aggressive magnesium environment.

PALRUF® White Opaque 3mm
This 14km phosphate conveyor is located in the Judean Desert, in the Dead Sea area.
Factories

Tempo Beverages Factory, Israel

PALRUF® White Opaque 2mm
Factories

Coca Cola Factory, Israel

PALRUF® White Opaque 2mm
Chemical Plants

The mechanism of chemical attack on thermoplastics in general, and Palram PVC sheets in particular, differs significantly from the mechanism of corrosion of metals. The chemical resistant behavior of Palram PVC sheet is therefore simple to determine.

PALRUF® Corrugated PVC sheets provide exceptional resistance against the following classes of chemicals in both liquid and vapor, form mineral acids, alkalis plating solutions, paper making, chemicals, pickling solutions, most inorganic compounds, alcohols, aliphatic hydrocarbons, glycols, amines, phenols and more.
Chemical Plants
Chemotel - Israel

PALRUF® White Opaque 2mm
Chemical Plants

Hobart Zinc Smelter - Tasmania, Australia

PALRUF® White Opaque 2mm
Chemical Plants

Dead Sea Works - Israel

PALRUF® White Opaque 3mm

PALRUF provides a long term roofing solution to withstand phosphate and other minerals produced at the plant.
In as much as Palram Industries has no control over the use to which others may put the material, it does not guarantee that the same results as those described herein will be obtained. Each user of the material should make his own tests to determine the material’s suitability for his own particular use. Statements concerning possible or suggested uses of the materials described herein are not to be construed as constituting a license under any Palram Industries patent covering such use or as recommendations for use of such materials in the infringement of any patent.
